

EUROHINCA

EuroHinca Maroc, S.A.R.L.

“Eurohinca, your trustworthy partner for tunnelling works and sea outfalls”

EUROHINCA EXPERTISE DRIVING COMPLEX UNDERGROUND & MARINE INFRASTRUCTURES

That is why we are YOUR CHOICE:

Innovation and global leadership

In 2018, Eurohinca set a **world record** by installing **the longest submarine outfall** ever achieved using pipe jacking technology with a closed-shield AVN microtunneling machine.

Location : Altamira – SouthTexas, Tuxpan (Mexico)

Internal diameter : 2600 mm | **External diameter:** 3200 mm

Total length: 2 246 mètres

ABOUT OUR COMPANY

EUROHINCA is an international leader in the field of underground and maritime works, with more than 30 years of experience in the design and implementation of complex infrastructure projects, both civil and maritime.

Headquartered in Getafe, Spain, **EUROHINCA GROUP** provides complete management of the value chain of each project, from design to implementation, including engineering, planning, logistics and project management.

Based on this recognized expertise, **EUROHINCA MOROCCO** implements this know-how in the service of the maritime and hydraulic development of the Kingdom, through large-scale projects such as the desalination plants of Agadir, Dakhla, Casablanca and Safi.

Thanks to a highly qualified team, specialized equipment and an approach based on innovation and sustainability, **EUROHINCA MOROCCO** actively contributes to shaping the future of hydraulic infrastructure in Morocco.

OUR AREAS OF EXPERTISE

Our expertise covers all the work of laying, connecting and crossing hydraulic and technical networks:

- Potable water systems
- Sanitation networks
- Main collectors
- Crossings under roads, railways and structures
- Submarine outfalls
- Special works and miscellaneous infrastructure

Thanks to an integrated approach and modern means, we ensure the turnkey realization of your projects, from design to commissioning.

OUR MISSIONS

POTABLE WATER SYSTEMS

We construct potable water networks through the installation of main pipelines, as well as gravity-fed or pressurized conveyance systems, using trenchless methods whenever required.

GUIDED CROSSINGS

Eurohinca Morocco specializes in guided boring techniques for the installation of pipelines beneath roads, railways, rivers, airport runways, and other complex structures, providing accurate, trenchless solutions.

SEWERAGE NETWORKS

Our teams install and rehabilitate gravity and pressurized sewer networks designed for the long-distance conveyance of wastewater and stormwater.

PRESSURE AND GAS PIPELINES

We install pressurized steel pipelines intended for the transport of water, gas, or industrial fluids, in full compliance with technical and safety standards.

SUBSEA PIPELINES

Eurohinca Morocco carries out marine works and the construction of submarine pipelines, ensuring seawater intake or discharge for desalination, treatment, and processing plants.

DRAINAGE AND WATER DISCHARGE SYSTEMS

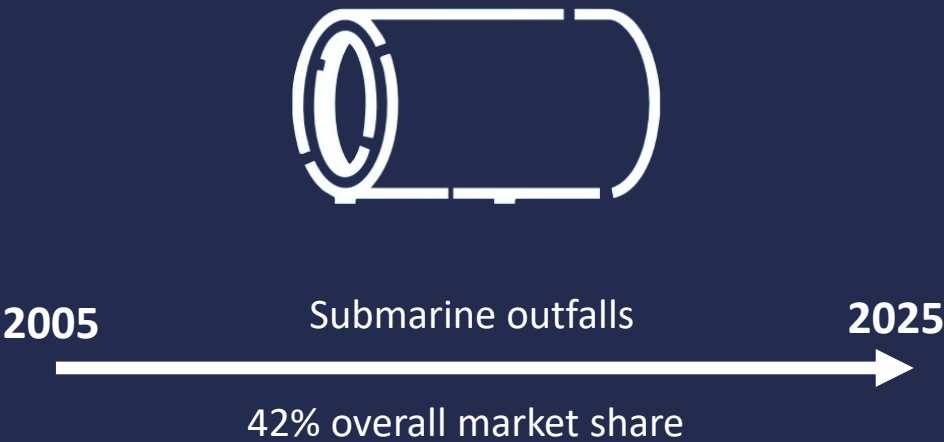

We implement efficient drainage and water evacuation solutions, ensuring controlled management of stormwater and contributing effectively to flood-mitigation efforts.

WATER TRANSFER SYSTEMS

Thanks to our expertise in pipe jacking, Microtunneling, and the installation of large-diameter pipelines, we ensure hydraulic continuity between pumping stations, reservoirs, dams, and distribution zones.

UNDERGROUND TRANSPORT TUNNELS

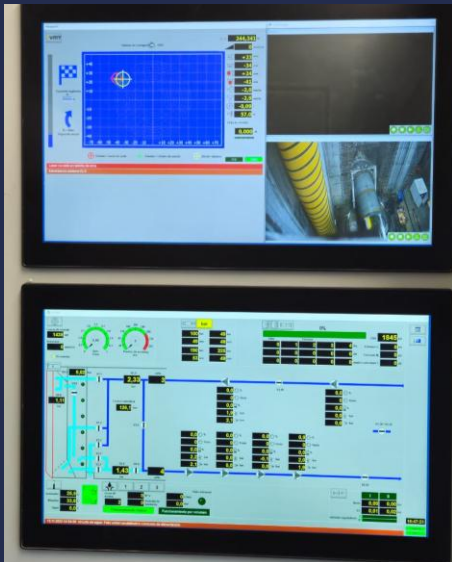

We operate on urban tunnel transport projects, including the construction of utility galleries and underground structures associated with metro lines. Our expertise guarantees precise and secure works, even in dense urban environments.

Since 2005, we have built 42% of all subsea outfalls in the world executed with TBM/EPB tunnel boring machines

*Based on projects using Herrenknecht tunneling machines

WORK METHODOLOGY

Our projects are based on a structured and proven methodology:

- Site study and engineering design
- Planning and project coordination
- Mobilization of human and material resources
- Execution and continuous quality control
- Project handover

This operational rigor guarantees the success of each project, from design to commissioning

SAFETY AND QUALITY

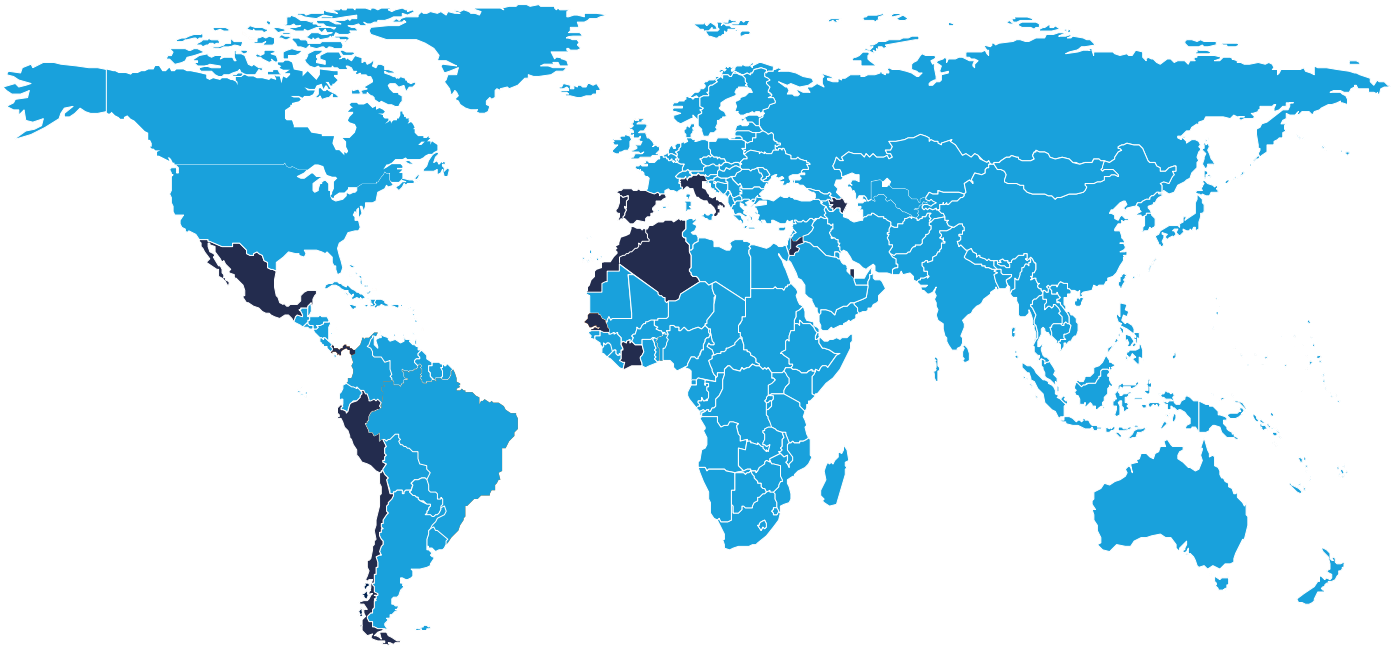

Safety and quality are at the core of our priorities. Each project undergoes strict monitoring to ensure:

- Compliance with Moroccan and international standards
- Continuous staff training
- Regular equipment inspection
- Respect for the environment and communities

Zero incidents, zero accidents, full commitment to environmental stewardship and quality.

EUROHINCA WORLDWIDE

Internationally recognized expertise, backed by 30+ years of tunneling and underground network experience.

EUROHINCA Group , founded in Europe, it works internationally on large-scale projects in the field of trenchless work, high-capacity pipelines and hydraulic infrastructures. Thanks to its know-how and a highly specialised equipment park, **Eurohinca** carries out complex projects in urban, industrial and maritime environments.

FROM GLOBAL TO LOCAL – EUROHINCA EXCELLENCE IN MOROCCO

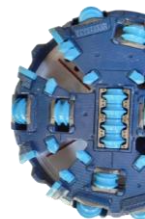

Leveraging its international experience, Eurohinca Maroc actively contributes to major hydraulic infrastructures in the Kingdom.

With the group's international experience, Eurohinca Morocco actively contributes to the construction of the most important hydraulic infrastructures in the Kingdom.

Our teams have participated in the implementation of strategic projects related to the production and distribution of drinking water, in particular in the context of seawater desalination plants developed by ONEE, OCP Green Water, Ministry of Agriculture, etc.

These projects are a testament to our technical mastery, our commitment to sustainability and our ability to work on large-scale projects, both in coastal and urban environments.

AGADIR DESALINATION PLANT (MOROCCO)

Owner : Ministry of Agriculture / ONEE – Water Branch

Client : ABENGOA

ID : 2300 mm - 2400 mm / OD : 3000 mm

SWI 1 : 1117 m

SWI 2 : 1118 m

SWO : 629 m

Geology : Rock / Sand

Eurohinca Morocco took part in the maritime works of the Agadir – Chtouka desalination plant, one of the largest hydraulic projects in the Kingdom.

Our teams were responsible for the sinking with tunnel boring machines and the installation of the collection and discharge pipes at sea, linking the station to the Atlantic Ocean.

The project was carried out in a sensitive coastal environment, respecting the highest requirements in terms of safety, quality and environmental protection.

DAKHLA DESALINATION PLANT (MOROCCO)

Owner : Ministry of Agriculture / ENGIE - NAREVA

Client : FISIA ITALIMPIANTI

ID : 1900 mm / OD : 2500 mm

SWI : 533,60 m

SWO : 668 m

Geology : Sand / Clay

As part of the national seawater desalination program, **Eurohinca Morocco** is working on the Dakhla desalination plant, a strategic project for the sustainable development of the southern region.

Our teams carry out the sinking with the Microtunnel boring machine and the laying of the pipes, intended for the collection of seawater and the discharge of treated effluents.

This project, carried out in complex ocean conditions, testifies to our expertise in coastal environments and our commitment to the success of structuring national projects.

CASABLANCA DESALINATION PLANT (MOROCCO)

Owner : ONEE – Water Branch
Client : ACCIONA / GREEN OF AFRICA
ID : 2600 mm / OD : 3200 mm
SWI 1 : 1833 m
SWI 2 : 1850 m
SWO : 1706 m
Geology : Sand / Clay

Eurohinca Morocco is participating in the construction of the Grand Casablanca desalination plant, which is set to become the largest in Africa.

The company builds the collection and discharge structures by sinking with Microtunneling machines.

This nationwide project aims to sustainably secure the drinking water supply of Greater Casablanca, while respecting the strictest safety and hydraulic performance standards.

SAFI DESALINATION PLANT (MOROCCO)

Owner : OCP Green Water

Client : JESA

ID : 2600 mm / OD : 3200 mm

SWI 1 : 838 m

SWI 2 : 862 m

Geology : Clay

Eurohinca Morocco is participating in the construction of the underwater outfall of the Safi desalination plant.

The project required close coordination between the land and sea teams, ensuring the stability and durability of the installation.

This intervention is part of the modernization of the hydraulic infrastructure of the Atlantic coast, contributing to the responsible management of water resources.

CAMBERENE WASTEWATER TREATMENT PLANT – DAKAR (SENEGAL)

Owner : National Office of Sanitation of Senegal (ONAS)

Client : INCATEMA Consulting & Engineering

ID : 2000 mm / OD : 2500 mm

UWT: 1200 m

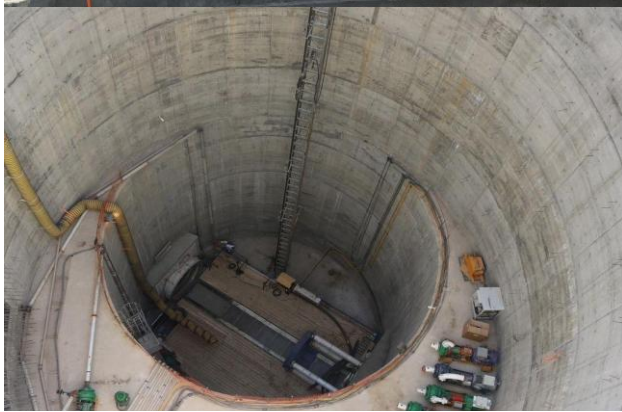

Geology : Sand / Calcareenite

Eurohinca participated in the construction of the underwater outfall for the project to modernize the Cambérène wastewater treatment plant in Dakar. This intervention focused on the installation by sinking with the tunnel boring machine to the evacuation of treated water into the sea, in accordance with international environmental standards.

This major project has significantly increased the wastewater treatment capacity of the Senegalese capital, while reducing the ecological impact on Senegal's sustainable development.

REHABILITATION OF THE GAM LAGOON – AMMAN (JORDAN)

Owner : Greater Amman Municipality (GAM)

Client : ENGICON

ID : 2400 mm / OD : 3000 mm

UWT 1 : 710,40 m

UWT 2 : 601,45 m

Geology : Rock / Clay

As part of the lagoon rehabilitation project of the Greater Amman Municipality, **Eurohinca** carried out sinking work with the tunnel boring machine and laying pipes for the transfer of rainwater.

The work consisted of the installation of pipes under very dense urban areas, making it possible to improve effluent management and reduce environmental risks.

Thanks to its technical expertise and its ability to intervene in constrained environments, **Eurohinca** has contributed to the sustainable strengthening of the sanitation network and hydraulic infrastructure of the city of Amman (Jordan).

PILOT ALTERNATING GAS INJECTION – WAG (QATAR)

Owner : Galfar Al Misnad Engineering and Contracting

ID : 1000 mm - 1200 mm / OD : 1260 mm - 1500 mm

Total Drive : 731,5 m

Geology: Rock

This pilot project is part of the development of advanced gas injection solutions using the WAG (Water Alternating Gas) process, aimed at optimizing hydrocarbon recovery in mature reservoirs. **Eurohinca** was involved in the associated infrastructure works, including the construction and installation of technical pipelines and underground structures required for controlled gas injection. The project was carried out in a demanding industrial environment, with high constraints in terms of safety, execution precision, and compatibility with existing facilities, demonstrating **Eurohinca's** expertise in complex and innovative energy projects.

BARZAN PIPELINE – ONSHORE WORKS (QATAR)

Owner: MEDGULF

ID : 1200 mm / OD : 1500 mm

Total Drive : 587 m

Geology: Sand / Rock

The Barzan project is a key component of Qatar's gas infrastructure development. **Eurohinca** participated in the onshore works related to the installation of pipelines intended for the transportation of natural gas from production facilities to processing and distribution areas. The executed works required rigorous control of pipeline installation methods under varied geotechnical conditions. This project illustrates **Eurohinca's** experience in major gas projects and energy infrastructures of national importance.

GAS SUPPLY – IGSMC PROJECTS (QATAR)

Owner : QATAR ENGINEERING & CONSTRUCTION COMPANY WLL

ID : 800 mm - 1500 mm - 1600 mm - 1200 mm - 1000 mm

OD : 1100 mm - 1860 mm - 1940 mm - 1500 mm - 1260 mm

Total Drive : 497 m

Geology: Sand

The IGSMC project in Mesaieed aimed to reinforce gas supply networks for industrial facilities in the area. Eurohinca was involved in the construction of pressurized pipelines and underground structures, contributing to the reliability and continuity of energy supply. Execution within a strategic industrial zone required rigorous planning and strict compliance with the technical and safety requirements specific to gas infrastructures.

WORKS FOR CNG STATIONS – RLIC & MIC (QATAR)

Owner : BLACK CAT
ID : 1200 mm / OD : 1500 mm
Total Drive : 403 m
Geology: Silts

As part of the EPIC program, **Eurohinca** carried out infrastructure works for compressed natural gas (CNG) stations located in the RLIC and MIC industrial zones in Qatar. The project involved the construction of underground structures and the installation of pressurized pipelines necessary for gas supply and distribution. The works were executed in an active industrial environment, requiring strict application of safety standards and precise coordination with existing installations. This achievement highlights **Eurohinca's** expertise in gas infrastructures and pressurized networks in industrial environments.

PIPELINES FOR MEGA-RESERVOIRS – RAS LAFFAN (QATAR)

Owner : BOOM CONSTRUCTION

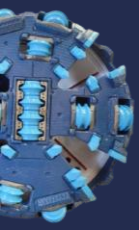

ID : 2000 mm / OD : 2420 mm

Total Drive : 148,5 m

Geology: Rock

Eurohinca participated in the construction of large-capacity pipelines intended to supply the mega-reservoirs of the Ras Laffan industrial complex. The project included pipeline installation and associated structures, ensuring reliable transfer of gas and industrial fluids within one of the world's most important energy hubs. The works were carried out under significant technical and operational constraints, requiring advanced expertise in pipeline installation methods and underground network integration.

RENOVATION AND WASTE REMOVAL – PUERTOLLANO REFINERY (SPAIN)

Owner : Repsol YPF / Acciona
ID : 2000 mm / OD : 2400 mm
Drive : 465,5 m
Geology: Clay

As part of the modernization program of the Puertollano refinery, **Eurohinca** carried out renovation works and industrial waste management related to petroleum installations. The project involved the construction of structures and pipelines dedicated to the transport and safe evacuation of industrial effluents and residues. The works were executed in a constrained industrial environment, requiring close coordination with ongoing refinery operations.

SEGOVIA-ÁVILA GAS PIPELINE (SPAIN)

Owner : Enagas

Client : Acciona / Collosa JV

ID : 1200 mm / OD : 1500 mm

Drive : 416 m

Geology: Granite

This project is part of the development and reinforcement of Spain's natural gas transmission network. **Eurohinca** participated in the construction of pipeline installation works designed to ensure the safe transport of gas over long distances. The works incorporated techniques adapted to topographical and environmental constraints, guaranteeing service continuity and infrastructure reliability.

TUXPAN – ALTAMIRA LANDFALL (MEXICO)

Owner : Comisión Federal de Electricidad

Client : TransCanada Energía

ID : 2600 mm / OD : 3200 mm

Drive : 2,246 m

Geology: Clay

South of Texas, **Eurohinca** executed the Tuxpan–Altamira Landfall project, consisting of the construction of a submarine outfall using microtunneling techniques. The project enabled the installation of a pipeline connecting onshore facilities to the marine environment under complex geotechnical and hydraulic conditions. This site represents a global benchmark, setting a record in terms of length for a submarine structure executed by microtunneling, and illustrates **Eurohinca's** expertise in large-scale international energy projects.

INCO – COMPLEMENTARY INFRASTRUCTURES (CHILE)

Owner : Minera Los Pelambres, Antofagasta Minerals

ID : 2000 mm/ OD : 2500 mm

Total Drive : 894 m

Geology: Rock

This project forms part of the development of essential infrastructures supporting mining operations. **Eurohinca** carried out underground structures and technical pipelines required for fluid transport, ventilation, and industrial services on site. The works were performed in a demanding geotechnical context typical of mining environments, with particular attention to safety, structural stability, and continuity of operations.

TENTE EN EL AIRE (CHILI)

Owner : Sociedad Química Chilena (SQM)

ID : 2000 mm / OD : 2500 mm

SWI : 888 m

Geology: Rock / Gravel / Sand

The project involved the construction of strategic underground structures within a mining complex, intended to connect and support existing industrial facilities. **Eurohınca** built buried structures enabling the passage of fluid networks, energy, and services required for mining operations. The works were carried out in a complex geological context, with high requirements in terms of safety and risk management.

C20+ (CHILE)

Owner : Compañía Minera Doña Inés de Collahuasi (Angloamerican / Marubeni)

Client : Acciona

ID : 2000 mm / **OD :** 2500 mm

SWI : 260 m

SWO : 190 m

Onshore: 390 m

Geology: Rock

The C20+ project involved the construction of underground structures aimed at upgrading and strengthening the infrastructure of an operating mining site. **Eurohinca** provided its expertise in the construction of technical tunnels and the installation of pipelines, contributing to the optimization of the site's internal transport networks. The works were carried out in a constrained operational environment, requiring rigorous control of microtunneling methods and continuous adaptation to the encountered geological conditions. This project demonstrates **Eurohinca's** experience in mining infrastructures requiring high levels of precision and reliability.

TALARA REFINERY MODERNIZATION (PERU)

Owner : Petroperú

Client : Graña y Montero

ID : 2000 mm – 2400 mm / OD : 2500 mm – 3000 mm

Drive 1 : 748,50 m

Drive 2 : 296,45 m

Drive 3 : 293,47 m

Geology : Clay

As part of the Talara refinery modernization program, **Eurohinca** carried out underground structures and industrial pipelines designed to support the new processing units. The project involved the implementation of technical infrastructures integrated into an existing petrochemical site, with high constraints in terms of safety and coordination. This intervention demonstrates **Eurohinca's** ability to support major industrial projects in complex and highly regulated environments.

OUR TECHNICAL RESOURCES

Technical resources that are up to every challenge.

Eurohinca Morocco has a modern and high-performance equipment park, designed to meet the highest requirements of its customers.

Our specialized equipment allows us to intervene with precision and efficiency in the most complex environments: dense urban areas, sensitive coastal environments or difficult terrain.

The technical means at **Eurohinca's** disposal, combined with a highly qualified team, guarantee complete control of the projects, from the design phase to commissioning.

OUR CLIENTS

Partnerships for major projects

Since its creation, **Eurohinca Morocco** has been collaborating with the main players in hydraulic and infrastructure development in Morocco.

Our clients and partners testify to the trust placed in our know-how and the quality of our achievements.

By combining transparency, rigour and innovation, **Eurohinca Morocco** maintains lasting relationships with its partners, at the service of the Kingdom's major structuring projects.

EUROHINCA, YOUR TRUSTED PARTNER FOR TUNNELLING AND OFFSHORE PROJECTS

Specialized closed-shield tunneling expertise.

Mastery of Slurry and EPB tunnel boring machines, adapted to the most complex soils.

Proven experience on a wide range of tunnel diameters, from the smallest to the largest.

Strong capability in high groundwater conditions.

Optimized urban intervention with controlled impacts.

In-house team of underground and Microtunneling experts.
